

INTEOS® 2.5 Ulnar plate distal

Delicate and extra flat design

Advantages of the INTEOS® 2.5 Ulnar plate distal

The new INTEOS® 2.5 Ulnar Plate distal system from Hofer Medical Solutions is characterised by its delicate design, while maintaining maximal stability. Determining factors for this are the minimised screw diameter and the curved outline of the shaft.

- ✦ Extra flat design
- ✦ Completely submersible screw heads as a result of higher multidirectional angle stability
- ✦ Supplementary treatment of bony instabilities of the radioulnar joint
- ✦ Angular variability and angular stability lead to high retention potential of the distal fragments
- ✦ Minimization of irritations due to low-profile design
- ✦ It is possible to place the plate laterally (ulnar), dorsally or palmar
- ✦ Anatomically pre-shaped, re-contouring possible
- ✦ Angle stable and polyaxial locking mechanism
- ✦ System added value: Compatible with screws and instruments of the INTEOS 2.5 Radius System

INTEOS® 2.5 Ulnar plate distal as av

creating partnership

For us, a partnership is the result of a long and happy relationship in all areas of our work. Reliable bone healing for patients, optimal handling of the systems for surgeons and surgical personnel, as well as the simple preparation of the instruments, constantly strengthen this partnership.

For us, "creating" means more than just finding solutions in the form of innovative products.

It is the result of high standards, constant development, innovative products and excellent service for patients, surgeons and surgical personnel around the clock.

Please do not hesitate to contact us if you have questions about our company, our employees or our production methods.
